TITLE: Utah State ground water program records

DATES: 1994-

ARRANGEMENT: Chronological by year, thereunder numerical by sample number

ANNUAL ACCUMULATION: 0.50 cubic feet.

DESCRIPTION:

These program records provide information about water quality to well owners whose wells are not covered under the Clean Water Act. They also provide information about water quality for general areas to the public and other state agencies. All records are connected by the sample number. After a sample is taken the physical attributes and GPS location are recorded on a database. Information from the data base and lab are merged into an electronic data base. An annual report containing general site maps, chemical data tables, and text are filed with the State Library System. The Pre-Sample Information Form is a paper document with all other information held in electronic data bases. A hard copy report is published annually with summaries of the chemical data and maps showing general locations. A digital image is also recorded at each site to assist in follow up visits to identify well locations. These images are labeled with the sample number and burned into a compact disc (CD) at the end of each sample season. It is projected by the agency that each sample site will be resampled every 5 to 7 years.
